

## NEWS RELEASE

### NeraTel Partners with uniXecure and Intelligent Wave to Present Joint Solutions at the RSA Conference

**SINGAPORE, 7 May 2024** – Nera Telecommunications Ltd (“NeraTel”, 挪拉电讯, or the “Group”) has partnered with Taiwan-based cybersecurity leader uniXecure Corporation Ltd. (“uniXecure”) and Japan’s Intelligent Wave Inc (“IWI”) to showcase their comprehensive endpoint protection solutions at this year’s RSA Conference (“Conference”), the convening authority for the global cybersecurity industry.

Designed specifically for international enterprises with a presence in Southeast Asia, the joint solutions presented by NeraTel, uniXecure and IWI at the Conference, held in San Francisco from 6–9 May 2024, run the gamut of endpoint security – from assisting organisations with

the auditing and management of software vulnerabilities across numerous endpoint assets, ensuring the security of applications before they are made available for users, to effective 24/7 monitoring services, which help enterprises mitigate the risk of internal data leaks, promptly detect vulnerabilities, and identify threat levels and distribution before implementing patches.

NeraTel's Chief Executive Officer, Mr Chong Hoi Ming (莊海明) said, "With remote working becoming the new norm, reliability on external connections and mobile devices has never been greater, making endpoints particularly susceptible as a target for cybercrime. This, coupled with the increasing sophistication of attacks, has made it necessary for many enterprises to make it their urgent priority to adopt effective cybersecurity solutions to fortify their cyber resilience, and protect their businesses and assets.

"Our international footprint and in-depth understanding of our customers' needs, as well as the global cyber threat landscape, put us in good stead to effectively deploy our joint cybersecurity solutions and services with uniXecure and IWI in Southeast Asia, a region of 680 million people driving one of the world's fastest economic growth rates."

Mr Jackie Chan (詹伊正), Chairman of uniXecure, added, "According to cybersecurity media in Taiwan, businesses expect a 20% increase in the risk of data breaches and a nearly 25% surge in vulnerability to cyberattacks next year. This has heightened the demand for detecting and responding to cybersecurity incidents. Our Endpoint Vulnerability Survey and Leak Prevention System help manage software vulnerabilities and prevent confidential data leaks, and is ideal for large enterprises, especially those with a large workforce and compliance obligations under data protection laws. Leveraging our extensive cybersecurity experience, we aim to assist Southeast Asian customers in deploying robust information security environments, ensuring comprehensive defense."

uniXecure is a wholly owned subsidiary of Taiwan Stock Exchange-listed SYSTEX Group. With over 100 staff, uniXecure provides one-stop cybersecurity solutions to government agencies and enterprises such as cybersecurity detection and services, continuous 24/7 monitoring services, and post-incident response such as phishing, ransomware and distributed denial-of-service (DDoS) attacks.

Founded in 1984, IWI is a pioneer in the software industry in Japan. Its technologies include proprietary systems in network connection, authorisation, and fraud detection, which have dominated a significant share of the Japanese market for over 30 years. Its proven track record in cybersecurity services span over 20 years.
